

PORT OF LIVERPOOL

HYDROGRAPHIC SURVEY CHARTS

As the Statutory Harbour Authority for the Port of Liverpool, The Mersey Docks and Harbour Company Limited (“MDHC”) undertakes periodic hydrographic surveys of the following navigable fairways within the Port:

- Queens Channel
- Crosby Channel
- River Mersey from Perch Rock to Bromborough Buoy
- Eastham Channel
- Garston Channel

Hydrographic surveys are undertaken to enable Port users to have available to them information relevant to their areas of operations so that effective passage planning can be undertaken.

Hydrographic survey charts (“charts”) can be made available for the aforementioned areas (and various sub-areas therein) on either a one-off or ongoing basis by contacting charts@peelports.com. The requested charts shall be provided via email in PDF format. The provision of printed copies of charts is a chargeable service.

Charts are provided on the basis that whilst every care is taken in the preparation of such charts, they are provided for general information only and are based on the data which MDHC possessed at the time of their preparation. It is not intended to amount to advice that can be relied upon thereafter. Although MDHC makes all reasonable efforts to update the information on charts, it makes no representations, warranties or guarantees, whether express or implied, that the charts are accurate, complete or up to date. No responsibility can be accepted by MDHC for any inaccuracy in any chart or any omission therefrom.
