

Project Cargo

We're Committed. We Care

Tom Harrison
Group Strategic Accounts Director

Peel Ports
More Than Ports

Peel Ports Group

As the UK's second largest port operator, we know a thing or two about supply chains and the safe, efficient transporting of goods.

But we do much more than that...

Our network is made up of 7 strategically located ports and 24 terminals, a short sea shipping line and a dedicated logistics division.

Group Brands

Peel Ports Group operates 7 ports and 24 terminals strategically located across the UK and Ireland, handling every commodity via a wide portfolio of services and bespoke solutions.

An integrated one-stop-shop logistics network which combines shipping, port operations, storage, container trucking and extensive distribution services.

The Group's shipping line enables comprehensive feeder services between Ireland, the UK and major hubs across continental Europe.

We're making a difference

45%

reduction in recordable injuries in the last five years.

We are committed to becoming **NET ZERO** 2040

50,000

hours of training, professional development and personal wellbeing each year.

3.3m litres

of diesel transitioned to greener fuels.

32% reduction of scope 1 and 2 emissions in the last three years.

97% electric vehicle fleet.

£120k

invested in protection, conservation and the enhancement of Marine biodiversity.

85+

active apprenticeships.

50% of all energy used will be renewable by 2030.

Together all the way

Collaboration that keeps cargo moving

Project cargo underpins some of the UK's most important industries – energy, construction, manufacturing and infrastructure. From turbines and transformers to steel, cables and oversized machinery, these moves are always high-value and high-risk.

At Peel Ports, we put **care** at the centre of every lift, transfer and mile. With **heavy-lift facilities**, **multimodal links** and **decades of experience**, we work with you to make complex moves feel straightforward.

Connected where it counts

With locations stretching from Scotland to the South East, our network provides national coverage and direct access to major road, rail and waterway links. Oversized and abnormal loads can move quickly and reliably to their destination, reducing risk of delay and keeping projects on track.

|--------------------|--------------------------------|
| C Clydeport | M Manchester Ship Canal |
| A Ardrossan | HB Humber Bulk Terminal |
| H Heysham | GY Great Yarmouth |
| L Liverpool | LM London Medway |
| D Dublin | |

Solutions at every touch point.

Every project is different. That's why we go beyond berths, cranes and general port operations. Through PortPlus+, we offer vessel chartering, customs clearance, ships agency and more – all managed through a single point of contact.

By simplifying the process and reducing unnecessary handovers, we create smoother, more reliable journeys for project cargo.

+Store

Protect oversized and heavy cargo with reinforced laydown areas and extensive indoor/outdoor storage across our port network.

+Move

Keep projects on schedule with vessel chartering, ships agency and multimodal connections that maximise efficiency.

+Process

Use port estates as pre-assembly sites to reduce risk and time pressures. Supported with on-site customs clearance to keep moves compliant and efficient.

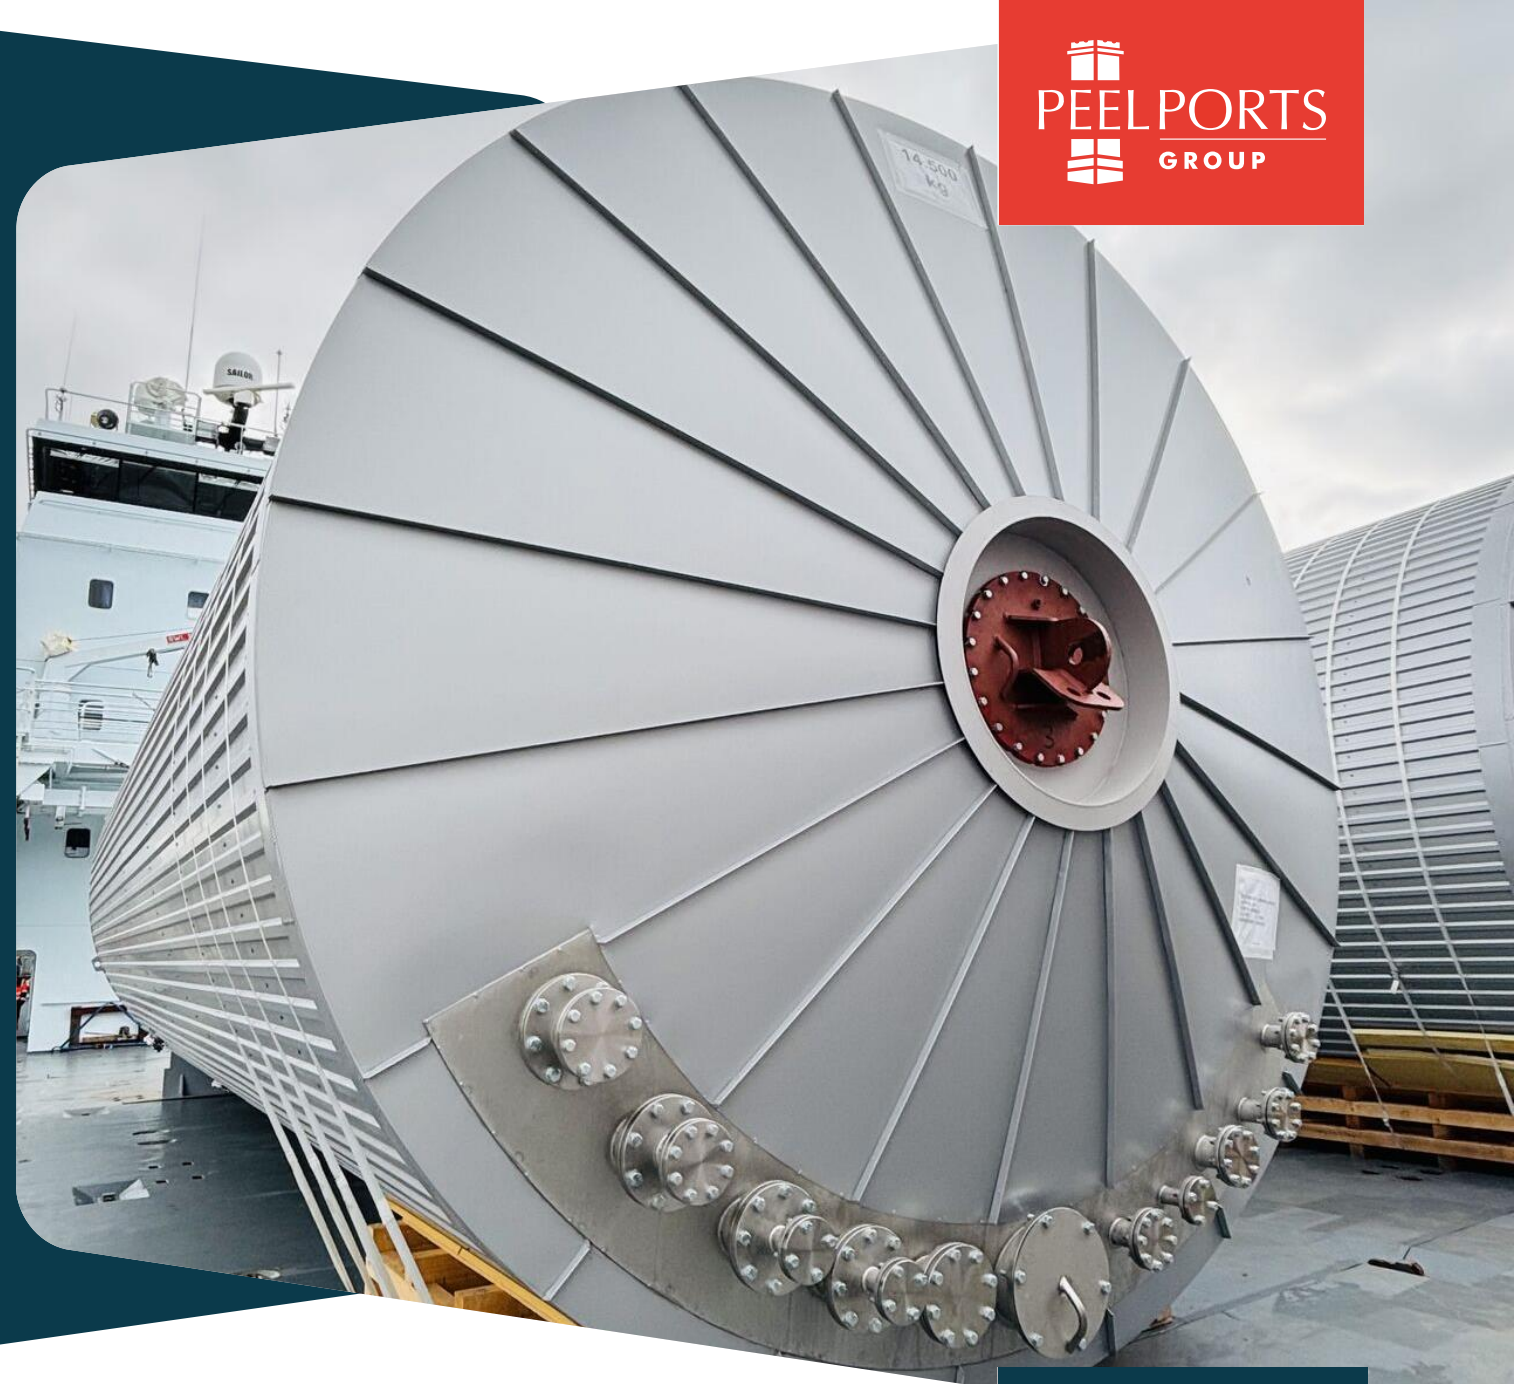

+Develop

For longer-term or large-scale projects, we can offer land within our port estates – ideal for your heavy-lift equipment or project-specific infrastructure.

Port of Liverpool

Flexible, Connected and Ready.

- **Multiple deep-water berths** → providing flexibility at short notice
- **Multiple laydown areas** → ready if projects are delayed
- **Multimodal links** → proven through Essar furnace project
- **Energy transition hub** → close to significant energy transition projects including Essar, Carrington, HyNet

Ellesmere Port

A proven regional hub for complex projects

- **Road and waterway access** → Motorway links and Manchester Ship Canal connection to the Port of Liverpool for flexible routes
- **Flexible storage** → 11,500m² heavy-lift space (expanding to 18,250m²) with reinforced quays and two heavy-lift berths inc. roro facility.
- **Proven regional hub** → Decades of experience with Stanlow, HyNet, Shotton and Connah's Quay.
- **Energy transition & EFW** → Established base for low-carbon and Energy-from-Waste projects.

Birkenhead

A versatile hub on the Mersey

- **Strategic location** → Directly across from the Port of Liverpool with strong motorway access into UK markets and Wales.
- **Flexible storage** → 275,000 sq. ft covered and 37,000 sq. ft open space for staging and protection.
- **Renewables focus** → Direct access to offshore turbine fields with quick routes via the M53.
- **Future growth** → Potential for dock infill to create further capacity for oversized moves.

London Medway

Confidence for construction in the South East

- **Road access** → Direct motorway links via the M2 and M25 into London and the South East.
- **Proven sweep path analysis** → Ensuring oversized and abnormal loads can move safely offsite.
- **Partnership in action** → 200 tonne Kemsley paper drum project, working with Fracht Group to reconfigure port exit and enable smooth delivery.
- **New RoRo berth** → Expanding capacity and flexibility for heavy and oversized cargo.

Great Yarmouth

Purpose-built Outer Harbour for complex project cargo

- **East Coast capability** → The only deep-water Outer Harbour on the East Coast purpose-built for offshore, oil, gas and project cargo.
- **Straightforward discharge** → Vessels can be offloaded directly onto SPMTs with a clear run to the Northern Terminal.
- **Growing capacity** → Ongoing upgrades are increasing quay load-bearing to handle heavier and larger project cargo.
- **Unrestricted access** → No locks or air draft restrictions, meaning faster steaming times in and out of port.

Clydeport

Scale and expertise to support Scotland's most ambitious projects

- **Multiple sites** → Greenock, King George V Dock, Hunterston, Inchgreen and Rothesay Dock all provide laydown areas and heavy-lift capability for project cargo.
- **Strong connectivity** → Direct access to the Central Belt of Scotland, supporting key industrial and energy hubs.
- **Proven experience** → Decades of handling complex projects including turbines, marine infrastructure and industrial equipment.
- **Trusted location** → King George V Dock is synonymous with turbine handling for onshore wind and remains a specialist hub.

Heysham

Invested, connected and proven in project cargo

- **Strategic location and connectivity** → Just 7 miles from the M6 via the new Heysham Link Road, giving fast access into the North West and beyond.
- **£10m port optimisation** → Investment includes a new heavy-lift pad and a dedicated out-of-gauge entrance to handle abnormal loads with ease.
- **Proven experience** → Previous projects range from turbine blades over 35m long to 150-tonne transformers, handled safely and efficiently.
- **Energy hub proximity** → Close to industrial clusters in offshore wind, gas and energy, with specialist teams experienced in unusual cargo moves.

Thank you

Any questions?

PROJECT CARGO

September 24th 2025

SUPPORTING THE UK'S JOURNEY TO NET ZERO

Allelys play a vital role within the energy sector and assist the UK's growth plans by transporting and installing critical infrastructure.

Working hand in hand with transmission and generating companies to deliver the commitment to a greener future.

We're here to connect the goals with the results and strengthen the UK's journey to net zero

OUR APPROACH

We continually invest in our people, our processes and our equipment to set the highest standards across every project.

We don't just deliver cargo, we deliver confidence, capability and results.

OUR APPROACH

We leverage our equipment alongside our in-house expertise to truly add value to each and every project.

- We work closely with our customers to develop bespoke solutions for the individual project requirements.
- We connect the needs of our clients with project deliveries that bring the country closer to achieving net zero.

OUR SOLUTION

ENGAGEMENT

ENGINEERING

**PROJECT
MANAGEMENT**

HSEQ

**PLANNING &
PERMITS**

**OPERATIONAL
DELIVERY**

ENGAGEMENT

The number of challenges within the UK road network continue to increase.

Utilising Allelys' knowledge and experience within the early stages of a project enables solutions to be identified, which saves time and money across the duration of the project.

ENGINEERING

- The FEED stage is crucial to the success of each energy project.
- Having the flexibility to engineer bespoke solutions for individual customer needs is a strength that flows through the Allelys business.
- We listen to our customer's requirements and engineer the most practical, cost effective and safe solution.

PROJECT MANAGEMENT

- With a project manager dedicated to every project, we have the ability to service the whole project delivery from a single point of contact.
- Project management is combined with industry leading engineering, HSEQ and planning and permits to deliver complex projects from engagement through to operational delivery.

HSEQ

- Health, safety, environment and quality are fundamental to Allelys and are at the heart of our business.
- We are committed to providing a safe and healthy working environment for our employees and every person that interacts with the organisation.
- Our safety performance is critical to the success of our business and our projects.
- We are committed to delivering a greener and safer future for the energy sector.

PLANNING & PERMITS

- Whilst we take pride in our expansive equipment fleet, this forms just one aspect of our solution.
- The knowledge and experience within our planning and permits department is key to being able to deliver results for our customers.
- With the continuous downgrade in UK infrastructure, and the increase in weight of project cargo, our experience is called upon each and every week to identify and clear suitable routes.

OPERATIONAL DELIVERY

Allelys continue our commitment to investing in industry leading equipment.

Our large equipment fleet sets us apart from our competitors and enables us to offer a range of solutions for each project scope, overcoming the challenges associated with moving abnormal loads on an ageing road network, and also supporting clients by offering the full factory to foundation service.

TRANSPORT

- Allelys own a fleet of specialist trailers including SPMTs, girder frames and modular trailers.
- Our engineering team design a bespoke solution for each project scope.
- We've continued to invest to meet the growing demands of the market and our girder frame fleet now incorporates 9 frames.

HEAVY LIFT & INSTALLATION

- Our specialist lifting and installation equipment includes cranes, hydraulic gantries, jacking systems and skidding systems.
- Allelys own and operate some of the largest cranes in the UK.
- With 900te capacity hydraulic lifting systems and a lifting capability of up to 1,500te, our expansive fleet is perfectly positioned to support the energy sector.

STORAGE

- Allelys support our customers by managing and arranging the temporary storage of critical components
- Our modular bund sections, which can be transported anywhere, are built and sealed to provide a temporary bund solution.
- This is an ideal and cost-effective solution for when a permanent bund is not available, storage is required at short notice or in emergencies.

DELIVERING THE COMMITMENT TO A GREENER FUTURE

The energy sector is on a journey to a more sustainable future and Allelys are perfectly positioned to enable transmission and generating companies to deliver on that commitment.

Leveraging our knowledge, expertise and equipment fleet to transport and install the critical infrastructure required and add value to every project.

Thank you for your time.

We will reconvene after a 20 minute coffee break.

Moving Project Cargo Together

PEEL PORT EVENT | LIVERPOOL

The background of the slide is a dark blue-tinted aerial photograph of an industrial facility. In the foreground, there are large, rectangular concrete structures and a body of water. A tall crane is visible on the left side. In the background, there are various industrial structures, including tall chimneys and buildings, under a cloudy sky.
